

VISSER box filler KK

VISSER
HANDLING EQUIPMENT

The fully automatic VISSER box filler type KK is designed for filling at high capacities. Due to its compact construction, the machine doesn't take up more space than necessary. The filling belt automatically lowers into the box, ensuring it is optimally filled. The touchscreen with LCD color display provides easy and intuitive operation. There are 6 standard programs preset, but you can also easily configure your own filling program in one of the 16 freely programmable slots.

The VISSER box filler type KK can standardly fill boxes measuring 1400x1100x1250 or 1600x1200x1250 mm. The filling pattern is evenly distributed across the entire width of the box, which ensures good airflow, leading to better preservation of your product.

VISSER HANDLING EQUIPMENT

Technical specifications VISSER box filler KK

Capacity:	Ca. 60 t/hr.
Dimensions (LxBxH):	Ca. 3.500 x 1.400 x 1.900 mm.
