

The fully automatic VISSER box filler type KV is suitable for filling at high capacities. The unique filling program ensures optimal filling of the box. Because the box is moved towards the belt, the drop height is minimal and product friendliness is guaranteed.

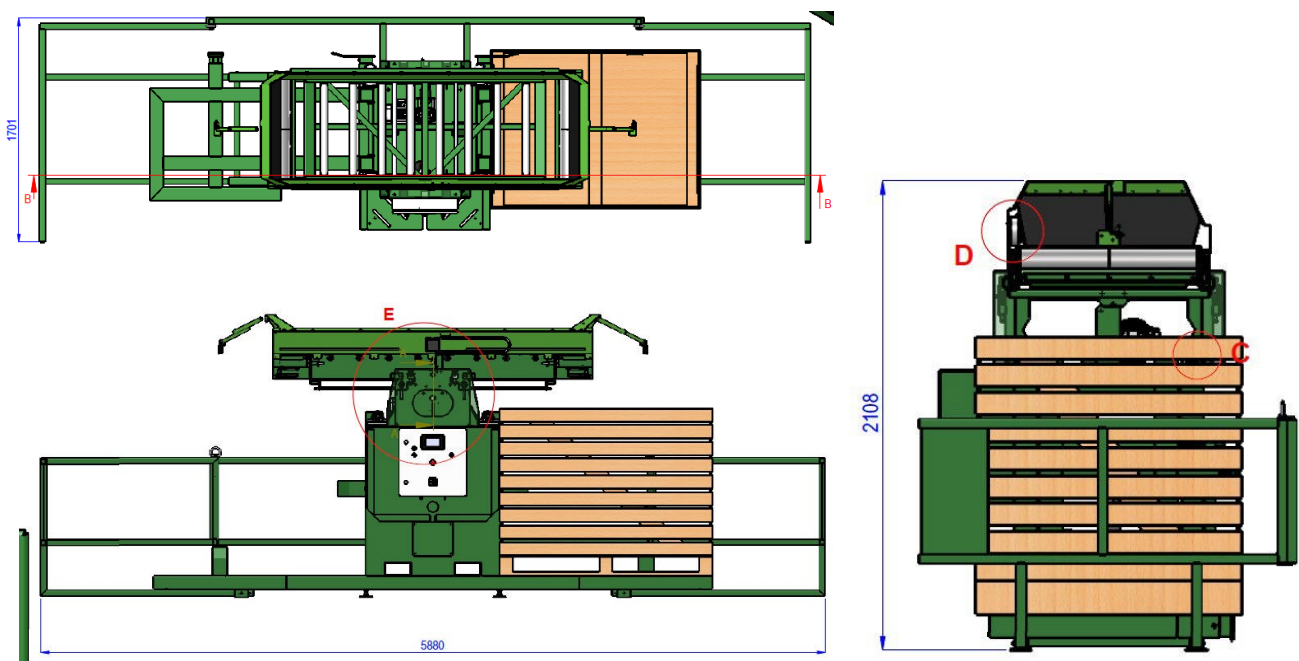

The Touchscreen with LCD color screen ensures easy and intuitive operation. There are 6 standard programs set, but you can also easily set your own filling program in 1 of the 16 freely programmable slots.

The VISSER box filler type KV can fill standard boxes of 1400x1100x1250 or 1600x1200x1250 mm. The lifting spoon tilts the box towards the movable belt. The filling pattern is even across the entire width of the box, which ensures optimal airflow and therefore better storage of your product.

Technische specificaties VISSER kistenvuller KV

Capacity:	Ca. 75 t/hr.
Dimensions (LxBxH):	Ca. 5.900 x 1.750 x 2.100 mm.
Gewicht:	Ca. 1.900 kg.
