

# VISSER pick-up scooter OM

**VISSER**  
HANDLING EQUIPMENT

The VISSER OM is a highly maneuverable scooping machine designed for various agricultural products such as potatoes, onions, carrots, and other tuber crops. During its development, the focus was on efficient, product-friendly, and easy scooping of your products.

The machine is easy to operate and equipped with an ergonomic seat. Switching from working mode to transport position can be done quickly. The open footplate of the telescopic section is fitted with two wheels, making it easy to transport when moving the machine.

Optionally, the machine can be equipped with a hydraulic grab, which is very useful for scooping and loading products such as onions.

The large grip belts ensure excellent penetration and, therefore, high capacity.
